Introduction - the role and importance of managerial competence in the implementation of sustainability goals in the company

The research identifies various factors that put pressure on companies to adopt sustainable practices, such as changes in customer preferences and demand, government regulations, ethical motivations and efficiency considerations¹. From this perspective, new professional competencies, i.e. green competencies, which LinkedIn's Global Green Skills Report 2022 describes as a catalyst for enabling environmental sustainability of business activities, are gaining importance².

It should be noted that the literature lacks a single universally accepted definition of the concept of green competence. Moreover, the definitions of green competence presented in the literature are characterized by variation in terms of indicating the dimensions of green competence. However, from the analysis of various approaches to the conceptualization of green competence, three basic components of green competence emerge, i.e. knowledge, skills and attitudes, so for the purposes of this report, we can define green competence as: "the complex of knowledge, skills and attitudes that enable successful performance of tasks and problem-solving, in relation to real challenges and, at the same time, opportunities related to sustainable development"³.

As indicated in the literature, the source of competitive advantage in the market is, among other things, the construction and maintenance by the enterprise of appropriate interactions with the environment⁴. The creation of positive relationships in this regard depends on the knowledge and skills of the staff of a given enterprise. Hence, it becomes necessary to properly form green competencies among employees.

The results of numerous studies show that environmentally friendly corporate activities generate financial profits⁵ and result in better business performance⁶. Those dealing with this issue also emphasize the great importance of environmental orientation of employees in achieving sales success of enterprises⁷. Pro-environmental activity of companies influences:

- (i) Reduce waste and save money through cost efficiency in production areas⁸;
- (ii) Meeting the environmental requirements of various stakeholders (i.e., the public, NGOs, governments)⁹;
- (iii) gaining a reputational advantage over competitors and increasing the number of markets the company can enter¹⁰.

Introducing environmentally friendly practices positively impacts company image¹¹. Managers are beginning to understand that today's consumers - especially Millennials and Generation Z - are looking for more than a transactional relationship with companies. Regardless of what they buy, consumers are increasingly demanding that companies contribute to reducing their environmental impact. According to Deloitte's 2019 Global Millennial Survey, more than a quarter of Millennials and Generation Z believe that companies should try to mitigate the effects

¹¹ Ibidem.

of man-made climate change and protect and improve the environment. However, only 12% believe that corporations are working on such issues¹².

In building and shaping employees' green competencies, as well as their green behavior, managers play a very important role. Based on studies of organizational behavior, it was found that leadership is the main source of employee motivation for organizational change initiatives¹³. Environmentally conscious leaders and top managers play a significant role in employee involvement in environmental programs. In fact, as managers' environmental awareness increases, their commitment to pro-environmental behavior also increases, and employees also feel more obligated to comply with environmental rules and regulations. The attitude of the organization's employees and managers also influences their environmental behavior, as they are the ones who will perform environmental tasks. Marshall et al.¹⁴ maintain that the attitudes and norms presented by managers provide motivation for employees to carry out environmental behavior.

In the context of the above, it should be noted that also the authors of the report *Climate Change and "green" competencies of employees*¹⁵ note that it is extremely important to raise the environmental sensitivity of management, especially senior management. The process of transition to sustainable management of a company/organization requires not only precise tools related to the reduction of its environmental impact, such as issues of zero-emission transportation, closed-loop economy or reduction of resource consumption. What matters most is the right management approach, expressed in environmental sensitivity and social responsibility in the decision-making process. Moreover, the authors of the Report point to the importance of building and implementing a company's strategy in the context of its environmental impact. This requires an increase in planning competence, as well as a refocusing

of the optics of the business conducted from an expectation of a quick and high rate of return to long-term business planning combined with an increase in corporate social responsibility.

Given the role of managerial competencies, an extremely important element of creating a strategy in the area of sustainable development of the organization, among other things, is the construction of maps of managerial competencies to determine the required competencies in the field of sustainability management in the area of sustainability management, as well as competency profiles for the above-mentioned managerial positions, to identify the strengths and weaknesses of middle and senior managers.

It should be mentioned at this point that the terms competency map and competency profile are used interchangeably in the literature¹⁶.

For the purposes of this paper, in order to distinguish the terms in question, competence mapping will be referred to as a process that consists primarily in identifying key competencies¹⁷. Competency profile, in turn, we will refer to as a tool that allows you to use the identified competencies in human resource management¹⁸.

A competency map is therefore a much broader concept that includes a competency profile. It is a collection of all competencies required of employees of an organization, grouped into appropriate sets for individual organizational positions. These sets are called competency profiles¹⁹.

Managerial competency map for sustainability management.

A competency map is an instrument to support knowledge management in large enterprises. Competency mapping is the process of identifying the competencies and behaviors needed for a specific job role.

As already mentioned, this process aims to identify key competencies for the organization and/or position and to integrate these competencies into various processes (i.e., job evaluation, training, recruitment) of the organization. In other words, competency mapping is a method of examining the strengths and weaknesses of an employee or organization.

Competency mapping is not a new concept. In 1911, F.W. Taylor introduced the principle of scientific management, which focused on reducing complexity and increasing productivity, which required that an employee perform work with full efficiency, which would be possible if the employee was assigned work that was consistent with his or her skills, knowledge, and ability to do the job.

Competency mapping involves determining which areas of competence a company should focus on to achieve its short- and long-term goals. It also involves taking an inventory of the current status of employees' knowledge and skills and comparing this status with the preferred status. The result of detailed competency mapping of key positions is usually a catalog of roles with needed competencies. Findings from the mapping are then used to create strategies and action plans to address challenges and achieve competency goals in the best possible way.

Individual organizations gain a competitive advantage when competencies are clearly defined and articulated, in that they have the knowledge of what to look for when hiring and how to develop competencies to be ready for the future. What's more, clearly defined competencies build greater cohesion within an organization, as they increase transparency and consistency with the organization's mission and core values.

The competency mapping process is a very comprehensive and organization-wide activity. It generally begins with a job analysis by collecting through questionnaires information on the key behaviors necessary for individual employees to perform the tasks of their positions. Competency-based job descriptions are then developed based on the analysis of the collected questionnaires. With a competency-based job description, competency mapping can be performed. The competencies of the relevant job description become the evaluation factors in the performance appraisal.

It should be emphasized that an individual does not need a single competency to perform a job, but a combination of several competencies. Two job roles may require the same competencies, but their degree or intensity may differ. Therefore, in the process of competency mapping, those competencies are identified that are necessary to perform the task or job role. These identified competencies can be core competencies that are required of all employees in the organization or workplace competencies that are unique to the role. In addition, the identified competencies may relate to functional and technical skills or specific behaviors. Depending on the identified competencies, a match is made to the relevant competencies of the potential candidate or current employee. The mapping can be specific to the position or at the organization level. The goal is to assess the degree of "fit" between the candidate or employee and the job role or organization.

Competency mapping identifies a person's strengths and weaknesses to help them better understand themselves and show them where to direct their career development efforts. Competency mapping can be done not only for an organization's permanent employees, but also including contract workers or job seekers to highlight specific skills that would make them valuable to a potential employer.

Effective competency mapping can be a tremendous asset to an organization, as it helps to streamline operations, improve productivity and shape strategy in everything from learning and development to recruitment, staff retention and evaluation. Of course, it also comes with individual development benefits.

- 1) Recruitment: Competency mapping can be invaluable at every stage of the recruitment process. Clear job descriptions based on required competencies help attract the right candidates and save HR the time and hassle of a flood of irrelevant resumes. Competency-based interviewing increases the chances of hiring people with the right skills. A lack of clear expectations and accurate job descriptions creates fear among employees that they will be seen as incompetent and punished for it, according to Gallup's 2017 State of the American Workplace report. The survey found that four in 10 employees were unaware of their job expectations, while only 41% said their work matched the job description.
- 2) Professional development: competency mapping allows organizations to identify gaps in existing and desired competencies and levels of proficiency, and to address these shortcomings by offering goal-oriented support for learning, skills upgrading and training. Providing clear pathways for professional growth and career development is critical not only to retain high-performing employees, but also to attract new talent.

Competency mapping increases employees' awareness of what is expected of them, helping them manage their careers in ways that lead to greater opportunities for promotions and more rewarding roles within the organization.

- 3) Appraisals: evaluating employees based on their proficiency in a set of competencies ensures a fair, merit-based appraisal system that will not only be appreciated by staff, but also improve productivity and performance. The standards set forth in the competency map will allow managers to communicate the strengths and weaknesses of each team member and advise on how to address their shortcomings - with the support of the organization, of course. Encouraging candid feedback from those being evaluated and acting on that feedback will make the process more transparent.
- 4) Succession planning: employees who demonstrate leadership skills and qualities can be prepared for future leadership roles through competency mapping. Gaps between current and desired levels of sophistication in the required competencies can be filled so that candidates are ready to take on the challenge when the time comes. In the absence of a strong competency matrix, one of the biggest obstacles to effective leadership is again the lack of clear expectations. The aforementioned State of the American Workforce report by Gallup found that managers, compared to their team members, are "four points less likely to say that their job description is clear or that it is consistent with the work they do."
- 5) Resource allocation: competency mapping facilitates project planning by helping companies assign the right people to the job, greatly increasing the chances of a project's success.

Bearing in mind that competency mapping and profiling should be carried out within and specifically dedicated to a specific organization, both the map and the competency profiles for sustainability management will be based on the competencies that have been identified in this area in the literature.

It should be noted that few studies have focused on explicitly specifying sustainability competencies. An analysis of the results of research conducted abroad points to 7 universal types of green competencies:

- 1) competence in systems thinking to understand complex sustainability problems: defined as "the ability to collectively analyze complex systems across different domains (society, environment, economy, etc.) and at different scales (from local to global)"²⁰;
- 2) competence in sustainability-related fields because in addition to general competence, a sustainability specialist should have competence in his or her specific field²¹;
- 3) interpersonal competence to facilitate stakeholder collaboration in the area of sustainability defined as "the ability to motivate, enable and facilitate collaboration and participation in sustainability research and problem solving"²²;
- 4) competence to act and take initiative, defined as the selection and implementation of appropriate actions to solve problems in the area of sustainable development²³;
- 5) the ability to anticipate future sustainability issues²⁴;
- 6) strategic thinking focused on developing strategies for sustainable development, defined as "the ability to collaboratively design and implement interventions and transformative management strategies toward sustainable development"²⁵;
- 7) Normative competence for sustainable development, defined as "the ability to map, define, apply, agree on and negotiate the principles, goals and objectives of sustainable development"²⁶.

In addition, *the Report on Climate Change and "Green" Workforce Competencies*, points out three additional competencies in this area in addition to the aforementioned, namely.

- 1) analysis of changes in customer preferences - customers not only want to purchase what is safe for the environment, but they also want to be convinced that these products have

²⁶ Ibidem s. 209

been produced in an ethical way that does not have a negative impact on the environment. Our environmental consciousness is growing and consumer behavior is changing, which is why competence in marketing research methods and techniques is so important, especially with regard to so-called *green marketing*;

- 2) green supply chain management - companies increasingly need to attach importance to recycling, reuse and reproduction, changing their production and distribution strategies to make more efficient use of the natural resources they obtain from the environment. This management plays a key role in helping companies gain a competitive advantage and improve their environmental image. Effective practices can help organizations reduce cash flow time, minimize risk, increase profits and ensure revenue predictability;
- 3) competence in shaping pro-environmental behavior at work - manifestations of such behavior are: taking care to save water, electricity, proposing new technical solutions conducive to the environment, educating other employees. In the case of managers, a very important task is such setting an example to others with their own behavior.

Having specified and defined competencies in the area of sustainability management, one can proceed to the construction of a very theoretical map of competencies for senior and middle management.

The competency map developed as part of the *Survey of Competencies in Networks and Clusters in the Creative Industries* will serve as a model for its development²⁷.

Figure 1: Map of managerial competencies in sustainability management.

"Green Competence".	Middle management	Senior managers
competence in system thinking		+
Competence in areas related to sustainable development	+	
interpersonal competence in the area of sustainable development		+
competence to act and take initiative	+	

²⁷ S. Olko, *Badania kompetencji w sieciach i klastrach w przemyśle kreatywnych*, Zeszyty Naukowe Politechniki Śląskiej, 2014, z. 76, p.46.

The ability to anticipate future sustainability issues		+
Strategic thinking focused on developing strategies for sustainable development		+
normative competence for sustainable development	+	
analyzing changes in customer preferences		+
green supply chain management	+	
Competence in shaping pro-environmental behavior at work	+	

Source: own elaboration

The above competence map was created on the basis of a general characterization of the area of responsibility of middle and senior managers. It should be emphasized that a detailed competency map should take into account the specifics of the organization and be prepared after an in-depth analysis.

A detailed competency map for middle and senior management should take into account factors such as:

- the specifics of a given company or organization
- sector and area of activity
- size of the company
- organizational structure
- the adopted hierarchy in the structure
- the adopted division of tasks and duties and roles and responsibilities in divisions/departments
- the adopted management model

These and many other factors will influence the specification of a competency map for a particular enterprise or organization.

The indicated areas in the presented competence map are the starting material for in-depth individual analysis and show a certain direction of thinking in the area of broadly understood green competencies.

Competency profiles for managerial positions in sustainability management

The competency profile indicates what competencies are necessary to perform the tasks of the job, and, above all, what their degree of mastery should be.

A competency profile is a document that records and identifies competencies for a job function. Indeed, a competency profile can be developed for a job, role, shared function or occupation. The purpose of a competency profile is to identify the level of mastery of competencies required to perform a job, role, function or occupation, and to organize them in an easily accessible and useful way. As part of the creation of the profile, all competencies should be translated into indicators (i.e., behaviors) so that interested parties can see the exact requirements of the jobs.

When selecting competencies for the expected competency profile of a job, it is important to remember that it should not include all competencies that affect the work of the position, but only those of key importance that contribute most to the quality of the tasks performed and efficiency in the position.

They definitely facilitate the recruitment process, since, having examined the competencies along with the levels of their mastery by the recruit, it is possible to easily compare them with the optimal mastery of the competencies indispensable for the position. However, the recruitment process is not the only scope for using competency profiles. It is also possible to outline the expectations of the current employees of a given company or tailor training that shapes the relevant competencies.

A competency profile chart is a general view of a competency profile. A complete competency profile is a detailed document that also includes the "sub-skills" required to perform each skill and the supporting knowledge and skills required to perform each skill.

Competency profiles are the basis for comprehensive performance development. Competency profiles define exactly what a person must be able to do in order to succeed at work.

They can provide various benefits, including:

- Providing a basis for recruitment and selection;
- Identifying strengths and skill gaps in employees;
- targeting skill gaps for development;

- creating employee development plans;
- providing the basis for succession planning;
- developing training programs that address the skills needed to succeed in the organization; and
- identifying overlapping job roles.

These are the many advantages of creating competency profiles. Organizations typically begin the process by identifying key roles in their organizations where competency profiles can provide the greatest benefit. For example, organizations often select key roles in security, leadership, customer service, or finally in sustainability to begin designing competencies.

This study will use the observation scale used within the framework of a study prepared for the Polish Agency for Enterprise Development entitled *Universal Competency Model. User's Guide*. (POL: *Uniwersalny Model Kompetencyjny. Podręcznik Użytkownika*)²⁸.

Figure 2 Competency development scale

LEVEL	DESCRIPTION
A1	Lack of desired behaviors, making mistakes, clear inability to cope with tasks requiring a given competence.
B2	Making attempts to behave in the expected way, to cope with tasks that require given competencies, making mistakes.
C3	Self-reliance, correct performance of most tasks requiring a given competence, problems with slightly more difficult tasks, errors in the case of new, non-standard situations.
D4	Efficient, flawless execution of most tasks requiring a given competence, dealing also with difficult tasks in non-standard situations. Displaying positive behaviors that describe the given competence (such people are often put forward as role models). Pointing out and explaining expected behaviors to others.
E5	Excellent performance of even extremely difficult tasks that require a creative approach to a given competence. A high level of automaticity of performed activities. Manifesting new behaviors in a given competence, setting trends and tendencies in this area

Source: *Uniwersalny Model Kompetencyjny. Podręcznik Użytkownika*. p. 23

We cannot directly observe competencies, as they are a theoretical construct. This means, among other things, that competence does not exist in isolation from specific behaviors.

²⁸ *Uniwersalny Model Kompetencyjny. Podręcznik Użytkownika*, Polska Agencja Rozwoju Przedsiębiorczości, 2022

As can be seen from the table above, specific behaviors are evidence of mastery of some competence, we can say that they are indicators of competence²⁹. Definitions and descriptions of competencies are created precisely on the basis of observable behaviors.

The fact that we describe professional competence by means of behavior gives us the opportunity to observe it and, consequently, to measure it accurately. The behavior on the basis of which we infer the competence possessed is called an indicator. Depending on what behavior the observed person exhibits in terms of a given category of behavior, we infer the level of his competence.

When creating a description of a given competency, it is first necessary to identify and list those behaviors through which the competency is made visible. Then the indicators thus identified and highlighted should be described. The description of competencies, made on the basis of the above-described scale of competence development, should lead to the fact that each of the highlighted competencies is presented in the form of a table. These tables are often called observation scales, as they allow us to observe individual behaviors according to their placement on the development scale. Of course, it is worth remembering that such a scale, as a rule, cannot represent all the behaviors associated with a given competence at a very detailed level. This would be impractical in the first place.

Through the implementation of the activities described above, observation scales for sustainability competencies were developed.

Tab. 2 Competencies in areas related to sustainable development

Competence in areas related to sustainable development					
Index	A1	B2	C3	D4	E5
Synthesis of the specialization possessed with the sustainability requirements implemented in the organization	Cannot synthesize his qualifications with the requirements for sustainable development. Considers it an unnecessary activity.	Tries to perform syntheses of its specialization with the requirements for sustainable development, however, does not do so effectively.	In most cases, correctly synthesizes his specialty with the requirements for sustainable development.	Correctly synthesizes his specialization with the requirements for sustainable development.	Always able to properly synthesize his qualifications and specialties with the requirements for sustainable development, which result in very positive results in the functioning of the organization.
Systems thinking with sustainability in mind	Fails to think systemically while taking into account sustainability.	Makes attempts at systems thinking and analysis in the field of sustainable development, but mostly unsuccessful.	Thinks systemically and tries to incorporate sustainability into most of this.	Thinks systemically and considers sustainability aspects every time.	An expert and mentor in systems thinking with sustainability in mind.
Consideration of different perspectives in decision-making	Doesn't consider different perspectives in decision-making. Thinks in unison.	Tries to take into account different perspectives in decision-making but with mediocre results.	In most cases, it takes into account different perspectives in decision-making.	Takes into account different perspectives in decision-making.	Every time, tries to take into account different perspectives in making decisions. Thinks outside the box.
Open-mindedness and acquisition of knowledge in various management-related fields	Is not open to new knowledge, does not seek to acquire it.	Acquires only the necessary knowledge. Is open to new knowledge to a very limited extent.	Is open minded and seeks to acquire new knowledge in various management-related fields.	Is very focused on acquiring new knowledge in various fields related to management. He has an open and receptive mind to all kinds of information that can be useful in this field. Tab. 4 Competence to act and take initiative

Competence to act and take initiative					
Index	A1	B2	C3	D4	E5
Showing initiative in action	Lacks initiative, is negative towards all kinds of extra-curricular activities.	For the most part, lacks initiative. Only on issues that affect him directly is he able to take grassroots action.	Able to show initiative in sustainable development, take necessary actions.	Shows initiative in sustainable o development and takes appropriate action.	Whenever the need arises, he shows initiative, takes rational and necessary actions while inspiring others.
Striving to achieve the set plans	Fails to carry out the plans set out, does not take steps toward their implementation.	Takes steps towards realization of set plans but most of the time inappropriate, ending in failure	For the most part, it successfully pursues its plans with sustainability in mind	Carries out the established plans, on time and in an appropriate manner, in particular taking into account sustainable development	Always implement the plans set out, even ahead of schedule, and always include sustainability considerations in the plans
Undertaking new sustainability initiatives and seeking solutions	Does not undertake new sustainability initiatives and does not seek solutions to emerging problems.	Tries to take new initiatives and seeks solutions only when forced to do so.	Takes new initiatives and seeks solutions - in most cases effectively and efficiently.	Undertakes new sustainability initiatives and effectively addresses emerging issues.	Strives to seek new initiatives, always undertakes them and finds solutions.

Identifying problems in the area of sustainable development and solving them	Cannot recognize problems in the area of sustainable development.	Tries to recognize problems in the area of sustainable development while failing to solve them.	Recognizes problems in the area of sustainable development and, in most cases, solves them.	He always recognizes emerging sustainability issues and solves them effectively.	Even recognizes potential problems in the area of sustainability. It always solves them effectively by also taking measures to prevent them in the future.
---	---	---	---	--	--

Tab. 5 Ability to anticipate future sustainability issues

Ability to anticipate future sustainability issues					
Index	A1	B2	C3	D4	E5
Analyzing the company's environment in terms of sustainable development	Is negative about analyzing the company's environment in terms of sustainability. Does not have competence in this area	Tries to analyze the company's environment for sustainability. His analyses are mostly wrong.	Analyzes the company's environment in terms of sustainability. His analyses are mostly accurate.	Has an analytical mind and attitude. His analysis of the company's environment in terms of sustainability is always correct.	Is an analytical expert in terms of sustainability. His analyses have a significant impact on the operation of organizations.
Anticipating potential sustainability issues	Cannot anticipate potential problems of sustainable development. He has no knowledge in this regard. His action is focused on the here and now.	He tries to anticipate potential problems in the area of sustainable development, but lacks competence in this area.	For the most part, he can foresee potential sustainability issues.	Anticipates potential sustainability issues with very high efficiency.	Always able to anticipate potential sustainability issues.
Critical analysis of sustainability issues in the organization	Does not critically analyze the organization's problems. Focuses only on the current operation	Attempts to critically analyze the organization's problems in terms of sustainability. Due to the lack of competence in this area, they are generally misguided	Critically analyzes the organization's problems in terms of sustainability. His analyses are mostly correct.	His critical analyses of the organization's problems are of very high merit and have a significant impact on the organization's functioning.	He is an expert in conducting critical analyses of the organization's problems. Thanks to them, emerging problems are always solved.
Taking risks	He does not want to take risks. Action in this area is unfamiliar to him.	Tries to take risks however, not always when required.	Takes risks, however, to a limited extent.	Is not afraid to take risks. He tries to analyze the consequences of taking it	He often takes risks, however, each time calculated and preceded by analysis.

Seeking information on trends in the area of sustainable development	Does not seek information and trends in the area of sustainability. He considers it an unnecessary activity.	Makes attempts to seek information on trends in the area of sustainable development.	Looks for information on trends in the area of sustainability. However, this is his additional activity and he does not focus on it enough.	Keeps up to date on sustainability trends.	He is an expert on trends in the area of sustainability. He is not only up to date with information in this area but generates trends in this area himself.
---	--	--	---	--	---

Tab. 6 Strategic thinking aimed at developing strategies for sustainable development

Strategic thinking aimed at developing strategies for sustainable development					
Index	A1	B2	C3	D4	E5
Identification and selection of sources of information and data needed to make a strategic analysis for sustainable development	Does not perform strategic analysis for sustainable development. He considers it an unnecessary activity.	Tries to identify and select sources of information and data, but they are generally not useful for making strategic analyses related to sustainable development.	Identifies and selects sources of information and data needed to make strategic analyses related to sustainable development. However, these are not always sufficient to make a comprehensive analysis	Selects and identifies always necessary and correct information to conduct strategic analysis	He is an expert in selecting sources of information and data needed for strategic analysis in the field of sustainable development. The analyses that arise from the information he collects are the basis for the organization's functioning in this area.
Processing the collected information in the field of sustainable development and drawing conclusions from it	Unable to properly process the information collected in the field of sustainable development and what follows, to draw conclusions from it.	Attempts are being made to process the data collected in the field of sustainable development, however, as the information collected is inadequate the conclusions are mostly missed.	Processes the collected information in the field of sustainable development and draws generally correct conclusions.	Draws highly relevant conclusions from the organization's perspective on the sustainability information gathered.	He is a specialist in collecting information on sustainable development. He sets trends in this area. The resulting conclusions are the basis of the organization's operations

Formulation of the strategic mission of the organization in the area of sustainable development	Does not participate in the formulation of the organization's strategic mission in the area of sustainable development. He is not competent in this area and has a negative attitude towards this activity	He tries to participate in the formulation of the organization's strategic mission in the area of sustainable development, but his lack of knowledge in this area makes his efforts inactive.	Participates in the formulation of the organization's strategic mission for sustainable development. His participation is quite significant but limited by his knowledge in this area	His activities in the area of formulating the company's strategic mission for sustainable development are crucial. He has extensive knowledge and experience in this area.	He is the main author of the organization's strategic mission for sustainable development. His knowledge and visionary approach set trends in this area.
Communication of the results of the strategic analysis in the area of sustainability to the company's employees	Is unable to communicate the results of strategic analysis to colleagues. He is a role model for others in the field of sustainable product lifecycle management. He sets trends in this area. His action brings very tangible benefits to the organization.
---	---	--	---	--	--

Tab. 10 Shaping green behavior at work

Shaping green behavior at work					
Index	A1	B2	C3	D4	E5
Use of methods and tools to build commitment to green behavior	Not familiar with methods and tools for building commitment to green behavior	Has basic knowledge of methods and tools for building commitment to green behavior but does not apply them.	He knows the methods and tools for building commitment to green behavior and applies them effectively in most cases.	He is very familiar with methods and tools for building commitment to green behavior and applies them effectively.	He has expert knowledge of methods and tools for building commitment to green behavior, applies them flawlessly, and innovates them effectively.
Stimulating employees to take action by setting examples in implementing green behavior	He sets a negative example for employees in implementing green behavior and demotivates them in this regard.	He does not set an example for his employees in implementing green behaviors, he does not implement them. They are indifferent to him.	He mostly sets a positive example for employees in implementing green behaviors. He tries to perform them however, he does not have full knowledge of how to implement them properly.	He sets a positive example for employees in implementing green behavior. Has a great deal of knowledge in this area and uses it in the course of his professional duties	He stimulates and inspires employees with his attitude, knowledge and commitment to implementing green behaviors. He is highly committed to their performance.

Creating solutions to increase employee engagement in implementing green behaviors	Fails to create solutions to increase employee commitment to implementing green behavior.	Tries to create solutions to improve employee engagement, however, ineffectively. He does not have enough knowledge and competence in creating them.	He creates solutions to improve employee engagement. They are mostly effective.	He is very knowledgeable in creating solutions to improve employee engagement. Creates very effective solutions in this regard involving subordinate employees.	Creates solutions to engage all subordinate employees in implementing green behavior. Has expertise in this area. He is a mentor and coach.
Promoting values related to sustainable development	He has a negative attitude toward sustainability values. His behavior in this area is disempowering to co-workers	He does not promote sustainability values. They are indifferent to him.	It strives to promote values related to sustainable development. Is mostly effective in its activities, in this area	He effectively promotes values related to sustainable development. Is committed by his attitude and behavior to their implementation.	He tries to promote sustainability values at every turn. His activities in this area are very effective. He inspires his co-workers and serves as a model and example for them.
Designing future activities in the area of sustainable development	He does not project future activities in the area of sustainable development. He considers it an unnecessary activity.	Tries to design future activities in the area of sustainable development, however, ineffectively. Does not have skills in this area.	Designs future activities in the area of sustainable development. Has basic skills in this area	He has extensive knowledge in the area of designing future activities. He is committed to the process and executes it very effectively.	He has expertise in designing future activities. His designs give birth to effective activities, and are implemented with enthusiasm by employees.

Each competency consists of several indicators - behaviors. To determine the level of a given competence, the level of each indicator is determined, and then an average is drawn.

Based on the above scale, theoretical competency profiles of middle and senior managers in the field of sustainability management were built.

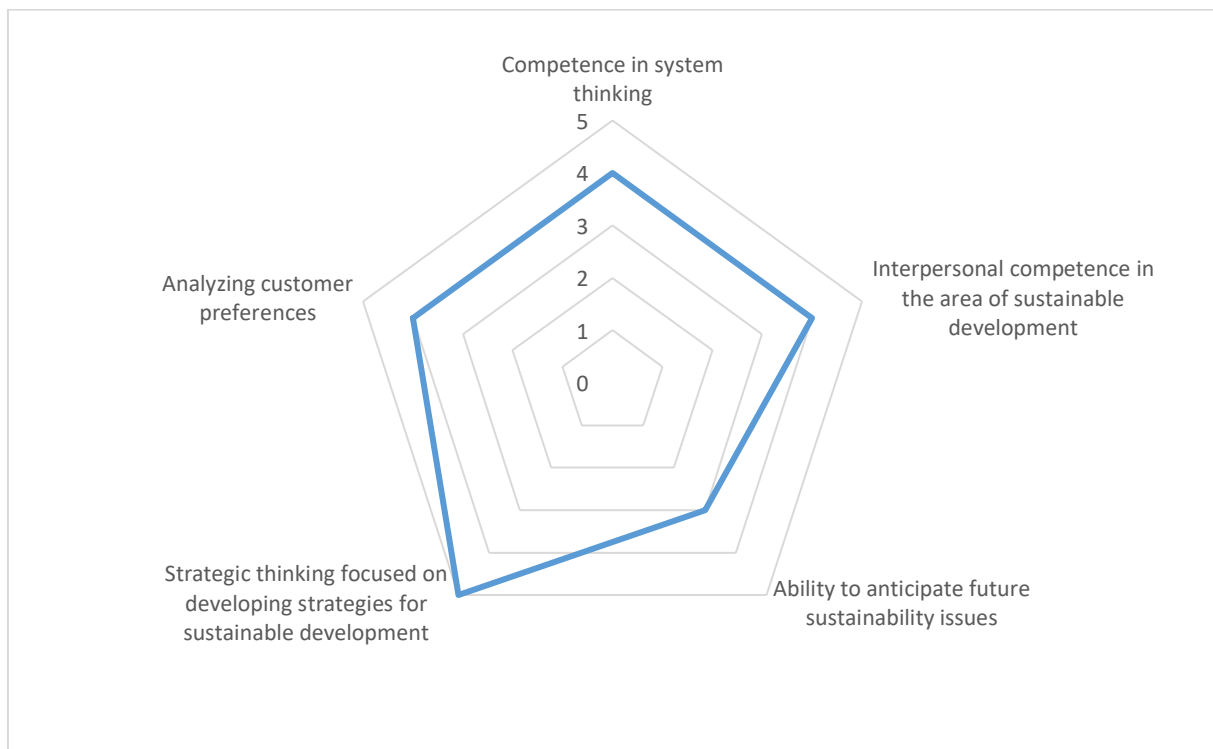

Figure 3 Competency profile of middle managers in sustainability management

Figure 4 Competency profile of senior managers in sustainability management

The above radar charts show the competency profiles of middle and senior managers in sustainability management. They have been defined in a general way so that they can be a reference for building dedicated profiles in the ranks of the organizations concerned. The following are worth noting in this chart:

1. Each competency is scaled, that is, it includes, according to the assumptions described above, five levels of its acquisition.
2. The chart shows a bold line, which defines the desired state, which w should be determined, depending on a number of conditions and analyses, by the company in question.

In determining the optimal level of each indicator, it is necessary to approach this very rationally, to determine what level of competence is actually necessary in the company.

In general, as the competencies of senior managers are profiled, their levels have been set quite high on a five-point scale (average of 4), since it should be assumed that they are high-ranking specialists in terms of their position and role in the organization.

COMPETENCY MATRICES FOR MIDDLE MANAGERS IN SUSTAINABILITY MANAGEMENT BY AREA OF OPERATION (ENTRY LEVEL)³⁰

1.	<p>SALES, MARKETING, CUSTOMER SERVICE, PUBLIC RELATIONS</p> <ul style="list-style-type: none">• Sales manager (sales manager), key account manager (head account manager), business development manager (market development manager).• Marketing manager (marketing manager), product manager (product manager), brand manager (brand manager).• Customer service manager• PR manager (public relations manager)

IRISH EXPERIENCE IN THE AREA OF COMPETENCY MAPPING FOR SUSTAINABILITY MANAGEMENT

Figure 5 The competence map for ESG managers

The purpose of this chapter is to present the findings of a review of ESG manager competencies and competency requirements in the ESG sector in Ireland. The above competency map was prepared using information from a wide range of sources available in Ireland, which allowed for a comprehensive analysis of the ESG sector and the sustainability of sustainable market managers in Ireland.

The competence map for ESG managers has been developed with the use of the following materials:

- *'Ireland for Finance – the strategy for the development of Ireland's international financial services sector to 2025'* launched by the Government in April 2019
- *'Report for Sustainable Nation and Sustainable Finance Skillnet'*, Deep sector analysis of future Sustainable Finance skills and talent requirements in Ireland, 2022
- *'Ready for the Change? An analysis of Irish companies ESG Readiness'*, KPMG 2021
- *'Roadmap to Leadership'* World Business Council for Sustainable Development, March 2022
- *'Organizational Competencies in the Development of Environmental, Social, and Governance (ESG) Criteria in the Industrial Sector'* M. Sierdovski, L.A, Pilatti and P. Rubbo, Sustainability Report October 2022
- *Global Green Skills Report 2022*, LinkedIn Economic Graph
- A thorough analysis of ESG manager job descriptions available in Ireland using www.linkedin.com as a source of information

Ireland is on the right path to become one of the best locations of choice for ESG and sustainable development. It plays a strategic role in recognising growth across all sectors of ESG and sustainability markets including adapting to market changes and the need for skilled employees within the sector.

The Green Industry is becoming increasingly important for Ireland as the market is rapidly expanding and the need to develop products, skills and innovations in line with sustainability and the green industry is becoming more needed each day. Ireland has the potential to meet global demands for employment, growth and meeting stakeholder needs as well as creating a large export platform of green skills to numerous countries which in turn will mobilise the public and private capital and expertise needed to deliver local and national ESG goals and sustainable development. As Deloitte estimates³², €50 bn of financing is required to deliver the sustainable infrastructure investment set out in the Government's National Development Plan 2018- 2027 as part of the overall strategy to meet Ireland's 2030 decarbonisation targets which are currently one of the most important targets when it comes to sustainability and ESG in Ireland.

It is also important to provide examples of companies on the Irish market which focus on sustainability, ESG, the green industry and quality assurance.

Furthermore, the research conducted found that there is no division when it comes to managerial levels in Ireland and all ESG Managers are expected to have the same level of competences, although the job

• ³² *'Report for Sustainable Nation and Sustainable Finance Skillnet'*, Deep sector analysis of future Sustainable Finance skills and talent requirements in Ireland 2022

descriptions may differ as it will be analysed further on in the test, the general competences needed remain uniform across different job titles.

ESG case studies, Ireland

Research conducted showed that even the biggest companies in Ireland are putting a big emphasis on the social aspect of ESG and building community relationships especially post Covid-19 pandemic. Below are case studies which showcase the ESG strategies that companies are using in order to fulfil the social aspect of ESG.

This can aid ESG managers as well as companies who want to become more sustainable and act according to ESG goals in providing good practices and ideas on social development.

McDonald's UK & Ireland

Under its four main pillars of Planet Positive, Great Food, Great Restaurants, and People Positive, McDonald's UK & Ireland's sustainability plan, Plan for Change, includes community- and people-related commitments. McDonald's UK& Ireland Human resources team says, "We will provide training, job experience, and equal employment opportunities to support our communities in acquiring new skills and opening doors."³³ By 2024, every restaurant must employ young people, by 2025, 3,000 apprentices must be supported, and by 2030, 1 million individuals must be assisted in acquiring new skills and finding employment³⁴. It's about utilising skills, and one of them has always been providing opportunity for others.

McDonald's has teamed with Children in Need to assist achieve their goal of having a youth worker in every store by 2024. The goal is to use the system to benefit communities. Franchisees will collaborate with youth workers and other partners on the matters that matter most to their neighbourhood in terms of sustainable development³⁵.

Microsoft UK & Ireland

Microsoft assisted its clients in making the switch to fully remote or hybrid working throughout the pandemic, and Microsoft Teams came to be relied upon by numerous businesses all over the world. "To empower every person and organisation on the planet and to achieve more. Microsoft sees its mission as being more important than simply offering software and services. The effect is what matters, not the technology"³⁶ said Andrea Winfield, general manager of HR Western Europe.

³³ CIPD, Ireland, 2022

³⁴ CIPD, Ireland, 2022

³⁵ CIPD, Ireland, 2022

³⁶ CIPD, Ireland, 2022

Microsoft is a key player in the growth of Ireland's digital economy. It started the "Get On" programme in 2020 with the goal of helping 300,000 individuals find tech jobs and 1.5 million people start careers in technology. This is made available through the ecosystem and partner network of Microsoft.

Employee resource groups (ERGs) are an intriguing method Microsoft use to interact with various communities. In order to create allies and assure inclusion for everyone, the ERGs play a crucial role both inside and outside.

ESG job descriptions, Ireland

The below are two of the job descriptions of an ESG manager found on LinkedIn³⁷ in order to showcase the needed competences, skills and key responsibilities of an ESG manager in Ireland as of November 2022.

Exact job examples taken from LinkedIn³⁸

- Exercising discretion at all times
- Fulfilling all care and high standards regarding both the companies and your own health and safety obligations

General

- adopt an approach of continuous learning and personal development
- To positively promote the Association in all activities
- Any other duties which are consistent with your role

Core Competencies

- Leadership
- Caring
- Responsibility
- Collaboration
- Customer Centric
- Sustainability

Departmental Competencies

- Attention to Detail
- Financial & Regulatory Acumen
- Analytical & Problem-Solving Skills

Education / Qualifications Essential Desirable

- Degree level
- Qualified accountant and/or Risk management qualification

Knowledge / Skills Essential Desirable

- I.T. skills to higher level including excel
- Risk management and control environment knowledge
- Attention to detail
- Problem solving skills
- To plan and organise at organisation and personal level
- Ability to adapt to new IT systems
- Excellent communication skills, verbal, written, report writing, presentation
- Strong analytical & statistical skills
- Strong influencing skills

Experience

- Experience of working in a property orientated environment or similar SME
- Experience of working in a team environment
- Experience of working with senior management
- Experience of developing and managing Risk assurance

Based on the two above job examples, it can be concluded that despite both jobs focusing on ESG management, the governance management role is more demanding than the ESG manager despite one focussing specifically on the governance aspect of ESG.

Therefore, based on the above examples and research conducted with the use of materials available on the Irish market and an extensive Irish ESG market analysis, the below competences map of competencies, skills and knowledge needed by ESG managers has been developed in order cover all aspects of ESG management.

COMPETENCES MAP FOR ESG MANAGERS

Specialised competences of an ESG manager

- Knowledge of the ESG and CSR subject.
- Knowledge of ISO 26000
- Knowledge of the CSRD Directive
- Ability to create links between theory and practice of ESG and CSR
- Ability to supplement the content in relation to new solutions emerging in the field of ESG and CSR and the topic surrounding them.
- Ability to successfully familiarise themselves with the Environment and Social Management System
- Ability to successfully develop, implement and monitor ESMS across all operational levels
- Ability to coordinate ESG and CSR incentives successfully
- Compliance with law and regulations surrounding ESG and CSR
- Coordinate working with Human Resources and leaders across all operational regions that the company operates at
- Know how to main and update company accident forms
- Know how to report to stakeholders regarding any accidents
- Ensure that the company applies the implementation of ESG and CSR across all levels.

Qualifications and experience

- Undergraduate degree or above in ESG discipline or related field
- Professional qualification in ESMS or equivalent
- Experience in Environment, Health and Safety management.
- Advanced working knowledge of ESMS
- Advanced working knowledge of auditing techniques
- Experience in managing emergency response
- Experience in implementing and managing Occupational Health and Safety Programs in a workplace
- Experience in conducting supplier audits
- Experience in conducting internal audits
- Efficient use of Microsoft package including excel
- Desired fluency in another language

Regulatory skills

- Ability to monitor the effectiveness of implementation the appropriate policies, procedures and regulations in their place of work

- Think analytically in the subject of ESG and CSR
- Focus on growth of ESG within the workplace
- Focus on performance of ESG
- Focus on the added value of ESG
- Understand the strategic management of ESG

Innovation Competencies

An ESG manager should have the skills to:

- Organise learning capacity and relevant training in the workplace
- Be collaborative with partners/ outside organisations
- Think innovatively and have the know-how in relation to new technologies
- Spark interest in new ideas within the workplace
- Use new technology e.g., Machinery, computer operating systems and internet-based applications
- Influence the knowledge of others in order to develop the capacity for innovation and creativity within the workplace

Corporate Social Responsibility Competencies

An ESG manager should have the skills to:

- Create CSR trends
- Create Governance policies in line with CSR
- Evaluate the performance of ESG strategies
- Communicate ESG and CSR practices in the workplace to improve transparency and legitimacy
- Promote sustainability
- Assess performance of ESG and CSR in the workplace

Leadership Competencies

An ESG manager should have the skills to:

- Be task orientated

- Take responsibility for CSR and ESG practices in the workplace
- Establish relationships with ESG and CSR stakeholders
- Be task orientated
- Manage ESG and CSR change
- Be persuasive
- Adhere to the given Human Resources Management practises
- Implement ESG practices
- Create a workplace culture of taking care of the employee wellbeing
- Support other management staff with ESG and CSR practices
- Understand the relationship between management and stakeholders

Organisational Effectiveness Competencies

An ESG manager should have the skills to:

- Collaborate with ESG and CSR experts
- Maintain employee engagement in order to promote a culture of ESG success
- Be dynamic and adaptable to change in ESG
- Align ESG and CSR strategies in order to increase efficiency
- Develop strategies in order to maximise the competencies of other employees in the field of ESG and CSR
- Develop strategies to enhance the ability of employees to achieve goals set out in ESG and CSR policies.

Environmental, Social and Governance Indicators

In order to disclose the Environmental, Social and Governance Indicators, an ESG manager should have the skills to:

- Maintain the quality of ESG research
- Evaluate the socio-economic and quality performance of employees
- Access credit rating
- Focus their reports on resources and ESG governance factors as well as market value
- Present ESG criteria in reports
- Analyse the performance of corporate governance by disclosing ESG information
- Make managerial decisions in ESG
- Develop ESG in order to gain market value

Learning Competencies

An ESG manager should have the skills to:

- Focus on the organisational development of ESG
- Assess the quality of ESG skills of the employees in order to maximise their performance
- Research new ESG and CSR strategies that can be applied in the workplace

- Create intellectual capital

Creativity Competencies

An ESG manager should have the skills to:

- Develop ESG training programs
- Develop creativity programs
- Inspire and create ESG knowledge capacity in the employees
- Inspire ESG knowledge sharing

IT Competencies

An ESG manager should have the skills to:

- Maximise the performance of ESG implementation through different IT programs
- Develop IT skills needed to manage ESG
- Focus on IT and ESG system synergy
- Seek the improvement of IT performance within the workplace in order to further develop ESG management

Dynamic Capability Competencies

An ESG manager should have the skills to:

- Create governance actions
- Implement environmentally correct projects and strategies
- Promote Human Rights within the workplace
- Promote Labour Rights within the workplace
- Develop relationships with suppliers
- Develop ESG and CSR strategies which meet societal expectations
- Search for resources which achieve efficiency within ESG and CSR

Multidisciplinary Sustainability Competencies

An ESG manager should have the skills to:

- Focus on sustainability
- Focus on economic, social and environmental issues
- Analyse financial data
- Implement actions focused on ESG
- Improve organisational reputation based on ESG

GLOSSARY:

ESG - Environmental, Social, Governance. ESG adopts the comprehensive viewpoint that sustainability encompasses more than simply environmental concerns. The ideal way to define ESG is as a framework for stakeholders to understand how a business is handling opportunities and risks connected to environmental, social, and governance criteria.

THE ENVIRONMENTAL IMPACTS AND RISK MANAGEMENT PROCEDURES of a company - referred to as environmental criteria. These include the company's overall resilience to physical climate threats, stewardship over natural resources, and direct and indirect greenhouse gas emissions (like climate change, flooding, and fires). The ties between a company and its stakeholders are referred to as the social pillar.

GOVERNANCE - describes the direction and management of a business. ESG analysts will work to get a deeper understanding of the ways in which shareholder rights are perceived, how incentives for leadership are related to stakeholder expectations, and what kinds of internal controls are in place to encourage leadership accountability and transparency.

ISO 2600 - offers direction to individuals who understand that respect for the community and the environment is essential to success. Application of ISO 26000 is increasingly seen as a means of evaluating an organisation's commitment to sustainability and its overall performance, in addition to being the "right thing" to do.

CSRD EU DIRECTIVE - The Corporate Sustainability Reporting Directive (CSRD) is scheduled for adoption by the EU in October 2022. The CSRD seeks to guarantee that businesses disclose adequately to the public the risks, opportunities, and effects of their operations on people and the environment.

CSR – Corporate Social Responsibility is a self-regulating business model that enables an organisation to be socially accountable to itself, its stakeholders, and the general public.

GLOBAL HR - In order to maximise productivity and engagement, global businesses must manage the geographic, linguistic, and cultural diversity within their workforce.

COMPLIANCE- the ability to act according to an order, set of rules or request.

ESMS- Environmental Sustainability Management System. An organisation may assess, manage, and mitigate the environmental effect of its operations, goods, and services, and operate with more efficiency and control by implementing an environmental and sustainability management system, which is a collection of management processes and procedures.

SUSTAINABILITY - Sustainability may be defined as the capacity to support or maintain a process across time. Sustainability aims to stop the depletion of natural or physical resources in business and policy contexts so that they will be accessible in the long run.

SUSTAINABLE FINANCE - "Sustainable Finance" has many definitions however, it generally refers to any financial service that incorporates ESG factors into decision-making for company or investments in order to benefit both investors and society at large in the long run.

ESG and managerial competencies in Hungary

The purpose of this paper is to present the Hungarian approach to the idea of sustainable development and to analyze managerial positions operating in the area of sustainable development. On their basis, an attempt was made to detail a group of basic competencies required by employers and professional tasks set for ESG managers. The study was prepared based on a content analysis of job advertisements in Hungary, posted on LinkedIn. Approximately 300 job postings were analyzed.

Hungarian understanding of sustainability

There is a growing awareness among businesses in Hungary of the importance of sustainability. The concept of ESG - the measurement and quantification of a company's actions in terms of social and environmental commitments - is gaining prominence in the operation of many companies. The purpose of this concept is to show that business can be responsible to the environment in which it operates. The growing role of sustainability is also being driven by current geopolitical events, including the current energy crisis.

In November, the Planet Budapest 2021 Sustainability Expo and World Meeting was held in Budapest, seeking answers to the question of how to reduce the risks posed by climate change in a post-covid world. Hungarian sustainability managers and leaders with green values asserted that climate protection can be effectively implemented in all areas of their business, from production to supply chains. They said that sustainability management is no stranger to those who are aware of the definition of corporate social responsibility, or CSR. For many, however, sustainability is a concept that is not fully understood, so a proper and effective marketing strategy is needed to implement it. To understand this idea better, a good example is a study conducted by the Statista portal, which summarized the business travel of employees of large German companies. It turns out that during 2021 alone, nearly 190 million business trips to congresses, trade fairs and conferences were made by airplane, with at least 60 percent of them lasting just one day. This can hardly be called an environmentally friendly solution, and in the years following the COVID-19 epidemic it will be completely unacceptable.⁴⁰ Sustainable development is strategic development that, in a complex system of society, economy and nature, ensures that the needs of the present generation are met without in any way diminishing

⁴⁰ <https://itbusiness.hu/technology/aktualis-lapszam/human/uj-karrierszakma-a-fenntarthatosagi-menedzser/>; [dostęp:02.11.2022 r.]

the opportunities of future societies. Nowadays, CSR is often referred to as corporate social consciousness, and companies that prioritize such activities are socially conscious companies. The Hungarian Managers Association's definition is much more accurate: CSR is a unified and general philosophy of business management and operation that emphasizes the mobilization of human resources rather than the depletion of natural and economic resources, in order to promote the sustainable development of the present and, above all, the future .⁴¹.

The increased interest in sustainability in Hungary, as well as the imposition of sustainability obligations on companies and consumer expectations, are contributing to the emergence of new professions and roles in the area of sustainability in business. The Explanatory Memorandum to the Directive of the European Parliament and of the Council on Corporate Sustainability Due Diligence and amending Directive (EU) 2019/1937 can read, among other things, that:

The behavior of companies from all sectors of the economy is crucial for the Union's successful transition to a climate-neutral, green economy in line with the European Green Deal and for the achievement of the UN's Sustainable Development Goals, including human rights and environmental goals. This entails the need for companies to implement comprehensive procedures for mitigating risks associated with adverse human rights and environmental impacts in their value chains, to integrate sustainability aspects into their corporate governance and management systems, and to embed business decisions in a framework that takes into account human rights, climate and environmental impacts, as well as the company's resilience in the long term .⁴².

The above passage indicates that the role of those responsible for preparing, implementing and monitoring ESG strategies at individual entities will become increasingly important. This is confirmed by the wide range of managerial positions in the ESG area shown below, which at the same time demonstrates a deep understanding of the issue among Hungarian entrepreneurs.

Examples of job positions in the ESG area:

- ESG Manager/Sustainability Manager;
- ESG risk monitoring expert;

⁴¹ Ibidem.

⁴² <https://eur-lex.europa.eu/legal-content/PL/TXT/HTML/?uri=CELEX:52022PC0071&from=EN>
[dostęp:02.11.2022 r.]

- Senior ESG consultant;
- ESG reporting specialist;
- Sustainability Consultant;
- Sustainability and climate change consultant;
- Sustainability analyst;
- ESG compliance auditor;
- ESG product manager;
- ESG strategy and development manager;
- ESG research manager.

Most common requirements for an ESG management position:

- 3-5 years of professional experience;
- University degree - science and natural sciences preferred;
- Experience in implementing regulatory and business requirements;
- Knowledge of national and EU environmental regulations;
- Willingness to develop in all ESG areas;
- Interest in sustainability topics;
- analytical thinking;
- problem-solving skills;
- Openness to changes in the ESG sector;
- Openness to a multi-tasking and fluid work environment;
- openness to new challenges;
- strong communication skills;
- ability to work under time pressure;
- Ability to explain complex issues in a clear and concise manner;

- ability to motivate the team;
- adherence to ethical principles;
- creativity in action;
- strategic and proactive thinking, willingness to innovate and develop new solutions;
- ability to organize the work of oneself and others;
- Experience in conducting internal audits;
- Proficient use of Microsoft suite, including Excel;
- fluency in another foreign language desirable.

Key professional tasks of a manager in the ESG area:

- Preparation, implementation and monitoring of the entity's ESG strategy;
- Development of internal regulations in the ESG area, taking into account legal requirements and other guidelines;
- reporting the entity's activities in terms of ESG factors;
- Communication and promotion of ESG activities;
- Monitoring ESG market trends;
- Coordinating with other units of the entity in the implementation of strategic projects and product initiatives taking into account ESG factors;
- Preparation of management analyses and summaries, corporate materials and presentations;
- Supervision of the ESG team, including monitoring the performance of tasks, providing substantive support, and ensuring that team members' skills are upgraded;
- Collecting and analyzing ESG information in the context of identifying and monitoring risks to sustainability;
- conducting internal audits on the implementation of the ESG strategy and reporting the results of the audits;

- keeping abreast of ESG legal developments and intermediate regulations.

The type of qualifications required for ESG positions generally depends on the ESG area in which the individual intends to work. Some areas will obviously require specialized knowledge and/or degrees and experience.

The analysis of job positions made it possible to list 5 areas in which ESG specialists are most in demand:

1. Engineering:

- A university degree in engineering, environmental management, sustainability or related fields;
- Familiarity with IT tools used in the ESG field, e.g. for data modeling and dashboard development.

2. Finance and banking:

- Qualifications in finance, accounting, economics, commerce or banking

3. Data analytics:

- Graduate degree in fields such as sustainability, environmental science or related fields;
- Strong communication and analytical skills;
- attention to detail;
- understanding of sustainability indicators;
- familiarity with data management software such as Excel.

4. Consulting:

- university education in various disciplines;
- Industry experience and knowledge - usually in environmental and social management, sustainability, finance, law, economics;
- Project management experience;
- -strong communication skills.

5. Research:

- Proficiency in analyzing large amounts of data;
- years of practical experience in the field;
- Science or natural science background preferred.

Appnedix 1 – TEST - basic level

1. the company's pro-environmental activities influence:

1. increase in the cost of doing business
2. gaining a reputational advantage over competitors and being able to expand the number of markets
3. Employment growth associated with the need to implement environmental standards

2. Green jobs include:

- (i) Companies that incorporate the principles of sustainable development in their operations
- (ii) National parks, nature reserves, state forests, etc.
- (iii) Only companies operating in industries that directly and on a large scale affect the possibility of curbing climate change

3. The key tasks of a marketing manager do not include:

- 1) analyzing market reports and forecasts, participating in the launch of new products and services on the market
- 2) building brand awareness, searching for new markets
- c) supervision of PR activities, supervision of the proper implementation of the customer service process

4. The green competencies of the administrative manager include:

- 1) The ability to manage a diverse work environment, the ability to develop pro-environmental attitudes in the workplace,
- b) Ability to identify inequalities in the workplace, ability to plan optimal solutions for the production process
- c) Eco-design skills, ability to manage a green supply chain

5. According to ESG principles, an HR manager should have skills in, among other things:

- 1) shaping the pro-environmental behavior of subordinate employees, implementing technological improvements and introducing novelties to the company's offerings;
- organization of training that takes into account the principles of sustainability in the workplace, analysis of labor market data for the availability of candidates with green competencies
- c) Preparation of a comprehensive environmental policy of the company, building good and lasting relationships with key customers in accordance with ESG principles

6. In order to implement the green supply chain principles, it is necessary:

1. introduce the ISO18000 standard
2. measure the environmental impact of various points in the supply chain
3. reduce the density of the distribution network

7. The ability to manage the optimization of the company's consumption of materials and supplies as well as equipment and facilities is a competency required of:

- a) personnel managing the administration department
- b) management of production and IT departments
- c) executives of every department of the company

8. The purpose of competency mapping is:

- a) identifying gaps in existing and desired competencies and proficiency levels
- b) offering targeted, targeted support for learning and upskilling
- c) answers a and b are correct

9. participation in discussion forms on new digital technologies in the context of sustainable development is one of the opportunities to improve competence by:

- a) All employees interested in this area
- b) managers associated with the IT department
- c) managerial staff of any department of the company

10. Competency definitions and descriptions are created based on:

- a) competency tests
- b) observable behaviors
- c) evaluation questionnaires

11. An example of eco-innovation is:

- a) installation of outdoor lamps powered by solar and wind energy, equipped with an intelligent lighting management system,
- b) creation of a green roof on the building, with layers to enable intensive or extensive plant cultivation
- c) answer a and b is correct

12. The competency profile of middle managers in sustainable development management includes, but is not limited to :

- a) Green supply chain management, interpersonal competence in the area of sustainability, ability to anticipate future sustainability issues

- b) Competence to act and take initiative, competence to develop pro-environmental behavior at work, green supply chain management
- c) Competence in systems thinking, interpersonal competence in the area of sustainable development, analyzing changes in customer preferences

Appendix 2 – TEST - advanced level

1. Key interpersonal competencies in the area of sustainability include:

- a) Seeking information on trends in the area of sustainable development, cooperating with others, showing initiative in action,
- b) Taking into account different perspectives in decision-making, analyzing the company's environment for sustainable development, taking risks
- c) Resolving conflicts and problem situations, building and developing relationships, taking motivational measures

2. The company's pro-environmental activities do not affect:

- a) gain a reputational advantage
- b) employment status
- c) saving of funds

3. Key responsibilities of the CFO include:

- a) Cooperation with the human resources department at all operational levels in which the company operates
- b) Collaborate with the sales department on pricing of products and/or services
- c) Negotiate and coordinate the company's contacts with customers, partners and suppliers

4. Systems thinking in sustainability management should be characterized by:

- a) directors of research and development departments of the company
- b) board members
- c) senior management of the company, regardless of the areas of operation

5. Universal types of green competencies include, among others:

- a) Interpersonal competencies to facilitate delegation of authority
- b) Ability to analyze changes in customer preferences for environmental awareness
- c) Strategic thinking aimed at ensuring the survival of the enterprise

6. A detailed map of management competencies should take into account factors such as:

- a) specifics of the organization in question, financial revenues, organizational structure
- b) the adopted management model, salary regulations, the size of the enterprise
- c) area of activity, adopted hierarchy in the structure, division of tasks and responsibilities

7. In order to control the flow of goods and minimize their negative impact on the environment, it is necessary to know and be able to implement:

- a) Green Supply Chain Management (GSCM)
- b) Life Cycle Thinking (LCT)
- c) Life Cycle Assessment (LCA)

8. The green competencies of the technical director include:

- 4) Ability to implement technological eco-innovations, knowledge of sustainable marketing mix
- 5) Holistic approach to the process of creating goods, implementation of green supply chain management
- 6) Eco-design skills, ability to implement LCT (Life Cycle Thinking) ideas

9. According to ESG principles, the HR director should have skills in:

- d) formation of pro-environmental behavior of subordinate employees
- e) Develop solutions to optimize the consumption of materials and articles as well as equipment and devices
- f) Preparation of a comprehensive environmental strategy of the enterprise

10. The competency profile of senior executives in sustainable development management includes, among others :

- a) Ability to anticipate future sustainability issues, green supply chain management, competence to act and take initiative
- b) Competence in systems thinking, interpersonal competence in the area of sustainable development, analyzing changes in customer preferences
- c) Strategic thinking aimed at developing strategies for sustainable development, competence in shaping pro-environmental behavior at work

11. Competency mapping can be used in an enterprise during:

- a) recruitment, succession planning
- b) restructuring, bankruptcy proceedings
- c) Planning of professional development, creation of company Social Benefit Funds

12. Which of the following sentences is true?

- a) The terms CSR and ESG are the same and can be used interchangeably, as both refer to corporate social responsibility.

- b) CSR is an organization's responsibility for the impact of its decisions and actions on society and the environment through transparent and ethical conduct that contributes to sustainable development, among other things.
- c) CSR and ESG are completely separate concepts; the former refers to environmental aspects and the latter to corporate governance.
